</Report>
```

What is BIBFRAME?

**The Bibliographic Framework Initiative
will re-imagine and implement a
bibliographic environment
for a post-MARC world.**

Key dates:

May 2011 – Initiative announced.

October 2011 – LC publishes general plan

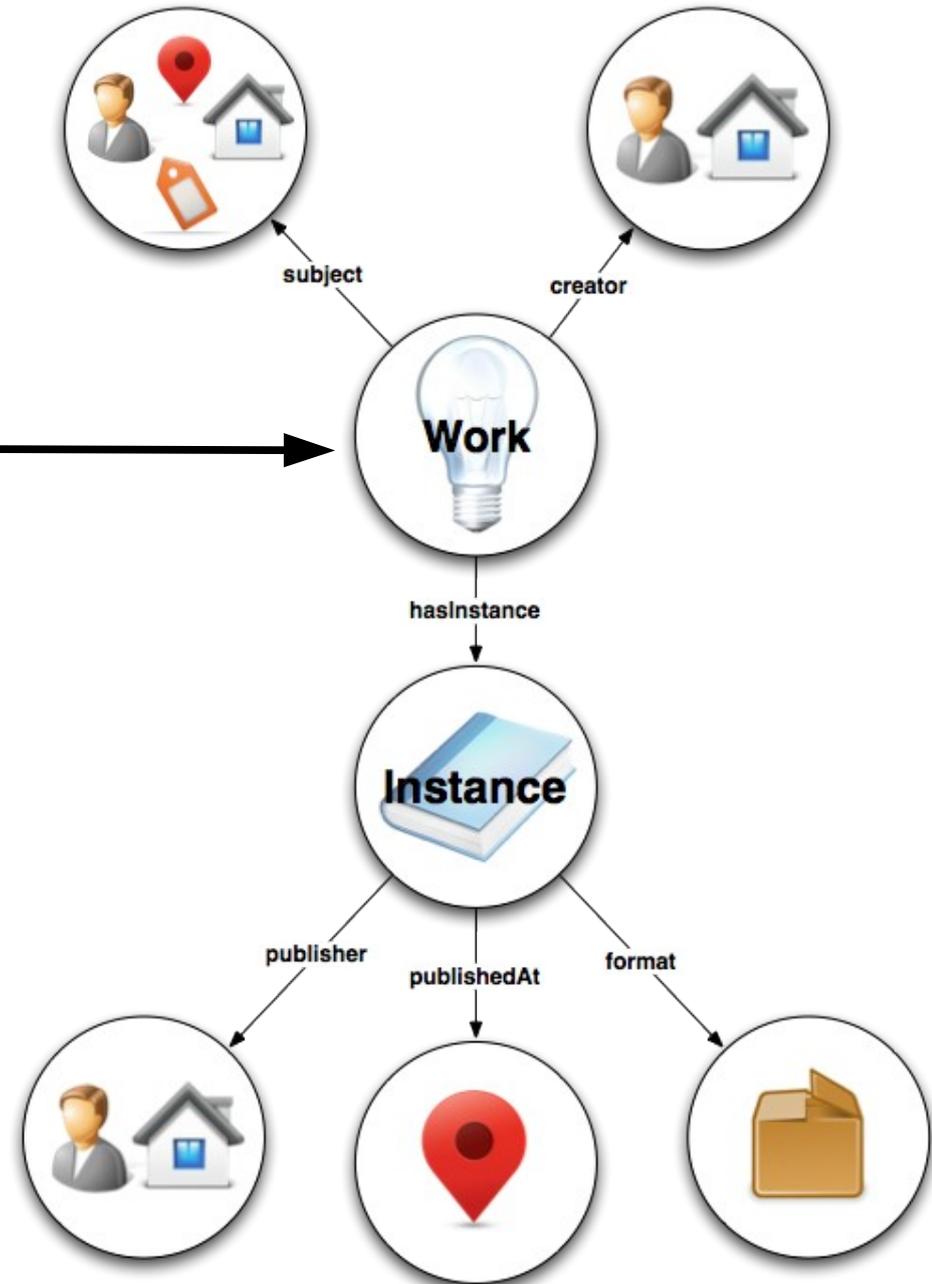

May 2012 – Zepheira LLC contracted to evaluate related initiatives and data modeling

November 2012 – LC publishes high-level model document

BIBFRAME Authority

From “Bibliographic Framework as a Web of Data: Linked Data Model and Supporting Services”
Pg 11.

Authorities are not designed to compete or replace existing authority efforts but rather provide a common, light-weight abstraction layer over various different Web based authority efforts to make them even more effective.

BIBFRAME Authority

```
<Report id = "http://bibframe/work/frbr-report">  
  <title>Functional requirements for bibliographic records :</title>

```

BIBFRAME Authority

Present definition of BIBFRAME Authority not wrong but...

the objective, as described in the primer, is achievable without the “abstract layer” construct.

Nevertheless, for other reasons, the abstraction layer becoming unavoidable

100, 110, 111 ... \$e

700, 710, 711 \$i

RDA emphasis on true, faithful transcription

In short:

The “abstraction layer” construct may have always been inevitable.

The ideal has always been envisioned separately from practice/reality.

Reality turns up things you weren't expecting.

Abstraction Layer

```
<Play id = "http://bibframe/work/burial-thebes">  
  <title>Burial at Thebes</title>  
  <creator resource = "http://bibframe/auth/person/heaney" />  
</Play>
```

```
<Person id="http://bibframe/auth/person/heaney">  
  <label>Heaney, Seamus, 1939-</label>
```

```
  <relationToWork>trans. buy</translationToWork>
```

```
  <hasIDLink resource="http://id.loc.gov/authorities/names/n79099140" />  
</Person>
```

Abstraction Layer

```
<Play id = "http://bibframe/instance/burial-thebes">
  <title>Burial at Thebes</title>
  <placeOfPublication resource = "http://bibframe/auth/place/nyc" />
</Play>

<Place id="http://bibframe/auth/place/nyc">
  <transcribedLabel>New York</transcribedLabel>
  <hasIDLink resource="http://id.loc.gov/authorities/names/n79007751" />
</Place>

<Geographic rdf:about="http://id.loc.gov/authorities/names/n79007751">
  <authoritativeLabel>New York (N.Y.)</authoritativeLabel>
</Geographic>
```

ID: LCSH

Quick facts about LCSH at ID.LOC.GOV:

Available since 2009
Approximately 415,000 resources

Quick facts about LCSH usage in LC's Voyager database:

24,893,391 total LCSH headings
5,692,450 **unique** LSCH headings

5,692,450 (million) > 415,000 (thousand)

LCSH – because of pre-coordination (which is a good thing) is basically an infinite system

ID.LOC.GOV has, at best, a subset of the possible.

ID.LOC.GOV does have the data from which one creates headings (well, mostly).

ID.LOC.GOV is missing, however, at least, about 5.3 MILLION known concepts

LCSH & Linked Data

Questions

**How to best do authority control / LCSH in a real-life Linked Data ecosystem?
How best to do authority control / LCSH in BIBFRAME?**

To pre-coordinate or post-coordinate

No contest: arguments presently overwhelming favor pre-coordination (and rightly so)

Still, distinct flavor for “faceting” with BIB data presently

Audience designations

Group characterization of authors

Medium

Temporal notions

URIs for the all possibilities?

Possible

Changes to LCSH practice?

LCSH Usage Stats

More about actual subject usage in the catalog*:

Components used (\$a + subdivs)	Number of Subject Headings
1	6,781,752
2	10,468,040
3	5,760,110
4	1,611,110
5	244,322
6	25,715
7	2,140
8	171
9	21
10	10

* I'd be interested to know how these stats compare to LCSH usage in the LC database *before* the Airlie House Conference recommendations

LCSH Usage Stats

More about actual subject usage in the catalog:

Subfield usage	No. of subject headings using the same pattern
a	6,781,717
ax	4,883,546
az	3,096,913
av	2,042,296
azx	1,046,032
axz	887,856
azv	773,085
axy	762,346
axx	709,172
azz	679,781
axv	458,786
ay	301,921
azzx	285,397
azzv	218,017
ayx	183,559

</Book>
```

Questions

What might the bibliographic universe be like if every known, legitimate LC subject heading had its own record/resource?

What are the benefits (or not) of removing form subdivisions from subject headings in favor of faceted identification of genre/form in the bibliographic record/resource?

General thoughts on the notion of a BIBFRAME Authority?

Thank you.
